Climate

China's climate can be compared to that of the United States in that there are four seasons, a primarily temperate climate, and conditions that vary widely from region to region.

North-Central China (Beijing, Xian) is similar in climate to Nebraska and Kansas, with less snow and rain during the winter. Late winter and early spring bring regular dust storms and haze.

South-Central China (Shanghai, Suzhou, Yangtze River) is comparable to the Gulf Coast states, though winter storms do not occur as often. Summer is hot and humid with frequent rain. Winter is shorter, cooler, and often overcast with drizzle.

Northwest China (Urumqi, Turpan) experiences severe climatic conditions with dramatic daily temperature swings. Summer can get very hot during the day, but generally cools off at night. Similarly, winter temperatures warm up during the day but plummet at night.

Tibet (Lhasa, Shigatse) also sees marked changes. When the sun shines, temperatures reach the mid-80s in the summer and the mid-60s in the winter. At night or when it rains or snows, temperatures drop significantly. Precipitation is minimal in the winter; summer showers are more common but occur mainly at night.
